

Being a Web Container - Servlet Config and Context

Being a Web Container - init parameters

- What are init parameters?
- Difference between Servlet Context and Config Init parameters

	Context Init Parameters	Servlet Init Parameters
Scope	Scope is Web Container	Specific to Servlet or JSP
Servlet code	<code>getServletContext()</code>	<code>getServletConfig()</code>
Deployment Descriptor	Within the <web-app> element but not within a specific <servlet> element	Within the <servlet> element for each specific servlet

Being a Web Container - Attributes

- What exactly, is an attribute?
- Difference between Attributes and parameters

	Attributes	Parameters
Types	Context Request Session	Context Request Servlet Init
Method to set	setAttribute(String, Object)	We cannot set Init parameters.
Return type	Object	String
Method to get	getAttribute(String)	getInitParameter (String)
